

Megalania (*Varanus priscus*) drives *Genyornis* from the Nest

GHM collects *Genyornis* eggshells from a nest at Geny Heaven, South Australia, containing a mass of eggshell consistent with at least 12 eggs, based on the mass of the only whole *Genyornis* egg ever found (near this site by Miller's team) and reconstructed by the South Australia Museum

GHM collects single eggshell of *Genyornis*, Arcoona Station, South Australia

The only known whole egg of *Genyornis* found in South Australia. Collected by GHM and reconstructed by the South Australia Museum. Known locally as the Spooner Egg. Note predation puncture upper left.

Recently exposed nearly complete eggshell of *Genyornis*, South Australia

The only almost complete *Genyornis* eggshell ever found. Located by N. Spooner, collected by G Miller, South Australia. Four puncture holes on the egg confirm it was predated by a scavenger marsupial.

Genyornis eggshell recently exposed by wind erosion of sand dune in which it was buried, South Australia

Genyornis eggshell fragments exposed by wind erosion of sand dunes, West Australia

Genyornis eggshells, Nest 1, Geny Heaven, South Australia; the mass of eggshell collected in $\sim 1 \text{ m}^2$ is equivalent of ~ 12 whole eggs.

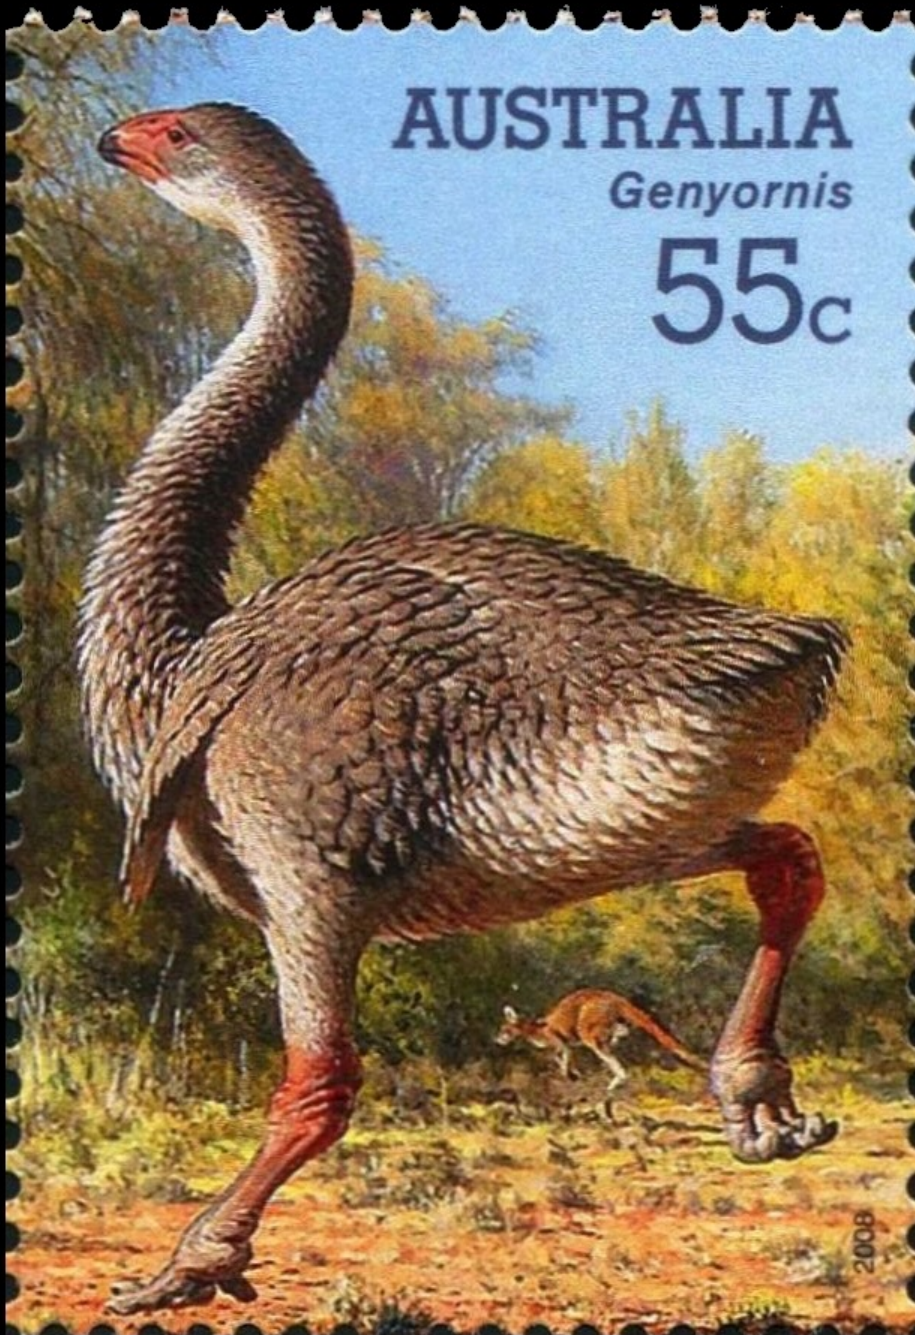

Genyornis eggshells, Nest 1, Geny Heaven, South Australia

Fragmented *Genyornis* eggshell found *in situ* near Etadunna Station, South Australia

Reconstructed *Genyornis*, Maybe
from the Australian Museum, Sydney.

Genyornis appears on an Australian postal stamp
